Baking Utensil Contact and Batch Status Record

The batch status changes when its preparation changes.

Truthful contact reporting belongs before the serving handoff.

Hypothetical example: a child reports a spoon crossing between two bowls, and the adult holds the affected batch while applying the household's existing allergy plan.

01 Stop the handoff

Stop the affected food handoff and inform the responsible adult.

Affected batch and intended boundary

Responsible adult informed

Immediate care action already required

02 Record the contact

Record the utensil and food-contact sequence.

Utensil and first food contacted

Next food or surface contacted

Observed sequence or unknown part

Baking Utensil Contact and Batch Status Record / Review & follow-through

03 Reset responsibly

Assign the food disposition and preparation reset under the established plan.

Adult food-disposition decision

Established plan and cleaning source

Suitable alternative actually checked

04 Confirm the offering

Confirm the actual status of food offered to the household.

Actual food status at serving

Tools and batch arrangement changed

Next person given the truthful handoff
