Emergency Water Inventory and Rotation Note

Count stored water separately from planned purchases.

Preparation needs a physical supply and an owned review.

Hypothetical example: four household members plan a three-day starting supply, count the gallons actually stored and assign the remaining purchase and date review.

01 Set the coverage

Record household coverage and the current guidance used.

People and additional needs considered

Preparation period chosen

Official guidance checked

02 Count the actual supply

Calculate the starting amount and count actual stored water.

Starting quantity and units

Water actually stored

Gap or uncertain container quantity

Emergency Water Inventory and Rotation Note / Review & follow-through

03 Check storage

Confirm suitable containers, place and rotation directions.

Supply form and container directions

Verified storage place

Expiration or refill review date

04 Own the remaining work

Assign the missing supply and next review.

Adult arranging missing supply

Actual placement completion

Next review adult and date
