Unit Price and Household Use Record

A lower unit price still needs a usable quantity.

The actual purchase must fit the household's meals and means.

Hypothetical example: a family compares two sizes on the same unit, records the larger package's full cost, and chooses the size its storage and current meals can use.

01 Identify the actual need

Name the food need and current inventory.

Food staple and meal use

Existing amount in the house

Quantity needed for chosen meals

02 Compare the current prices

Compare the available prices on the same unit.

Option one price, size and unit

Option two price, size and unit

Sale condition or conversion checked

Unit Price and Household Use Record / Review & follow-through

03 Check household fit

Check total outlay, storage and planned use.

Full purchase cost and current limit

Storage and after-opening direction

Chosen uses for the quantity

04 Review the choice

Record the selected size and actual use review.

Package size selected and reason

Actual use or storage observation

Next purchase adjustment
