Comparable Appliance Estimate Record

Keep the label estimate beside its stated basis.

An estimated operating cost is not a promised household bill.

Hypothetical example: an adult records the exact two models, compares their stated label groups and units, and leaves installation terms open until the seller supplies the actual quote.

01 Match the models

Identify exact models and the household job.

Appliance job and required capacity

Exact model identifiers

Official label locations

02 Read the estimates

Record label figures with their assumptions and units.

Estimated cost and stated basis

Annual energy use and units

Label information still unclear

Comparable Appliance Estimate Record / Review & follow-through

03 Check comparability

Read the comparison group and separate purchase terms.

Comparable label group

Feature or capacity difference

Price, delivery or installation question

04 Make the bounded choice

Record a current choice without promising future savings.

Chosen model or decision held

Reason supported by current information

Unresolved term and next verification
