Shared Supply Restock Record

Select one ordinary nonfood supply and its usual location.

Make the remaining supply and the responsible restock decision visible before the household assumes someone else handled it.

Hypothetical example: A family checks the paper already in another drawer before authorizing a restock purchase and updates the usual supply location.

01 Choose one supply to understand

Select one ordinary nonfood supply and its usual location.

Supply selected

Usual location

People using it

Quantity actually observed

02 Check the real remaining amount

Check the actual amount remaining and the relevant product instruction.

Observation date

Product instruction checked

Decision needed

Responsible adult

Shared Supply Restock Record / Review & follow-through

03 Give the decision an owner

Assign the next decision to a responsible adult before any purchase.

Existing supply elsewhere

Actual option considered

Purchase authorized

Handoff communicated

04 Close the request accurately

Record what was obtained or changed and update the household handoff.
