Ingredient Order and Honest Inference

Keep the list and your conclusion separate

Relative order is not an exact recipe.

Hypothetical example: A pictured ingredient appears later than expected; the shopper records its position without guessing its percentage.

01 Ask what the list can actually answer

Choose a product and identify the exact ingredient question.

Product and version

Front wording being considered

Specific ingredient question

02 Read weight order without inventing percentages

Copy the relevant order and preserve any qualifiers.

Ingredient wording and order

Grouping or qualifier preserved

Amount actually disclosed

Ingredient Order and Honest Inference / Review & follow-through

03 Do not turn unfamiliar names into a danger score

Separate ingredient evidence from nutrition and suitability questions.

Nutrient information needed

Restriction requiring separate review

Unsupported inference to avoid

04 Write a conclusion the package can support

Write the supported conclusion and the next household decision.

Supported observation

Open product question

Household choice and reason
