The Radura Mark Does Not Mean Food Is Radioactive - working notes

One situation. Clear facts. An honest next step.

FDA explains that food irradiation does not make food radioactive. The process does not replace appropriate storage, handling or cooking, so use the actual package directions.

Hypothetical example: An adult learns that the irradiation mark does not mean radioactive food, corrects that description and follows the package's ordinary storage and cooking directions.

01 Read the wording before rejecting the package

Read the actual mark and treatment wording.

Product description

Treatment wording observed

Concern to check

02 Keep treatment separate from radioactivity

Check FDA's explanation of irradiation and radioactivity.

FDA explanation consulted

Supported process meaning

Inference to correct

The Radura Mark Does Not Mean Food Is Radioactive - working notes / Review & follow-through

03 Keep normal handling in the plan

Follow the food's normal handling and preparation instructions.

Storage instruction

Cooking or serving instruction

Separate product question

04 Explain the choice without exaggerating either side

Communicate an accurate household decision.

Use or alternative decision

Information for the next cook
