Recipe Dependency and Starting Order

Know what has to happen before the next step.

A task sequence should preserve the complete method.

Hypothetical example: the cook notices that a listed component must be prepared before mixing, assigns that job first, and lets a helper set out serving utensils while it is completed.

01 Read the whole method

Identify the exact recipe and every preparation word.

Recipe title and version

Preparation words needing a step

Instruction still unclear

02 Map the dependencies

Write which action must finish before another can begin.

First necessary action

Dependent action and reason

Method requirement kept with the step

Recipe Dependency and Starting Order / Review & follow-through

03 Assign useful help

Give each helper a bounded job in the proper order.

Adult following the method

Helper job and finished condition

Task that must wait

04 Save the working order

Record the starting order and one observed correction.

Agreed order of actions

Handling question and verified answer

Observation to carry into the next attempt
